PierTech Systems has been a leader in the helical foundation stabilization industry for over 20 years. PierTech Systems provides the very finest in high tensile strength helical piers and anchors. PierTech Systems has created ground breaking systems such as the Tru-Lift Bracket, The Insta-Brace Anchor, and the Cross-Bolt Connection. Now, PierTech Systems has done it again with the patented Hercules Pile!

helical piers and anchors. PierTech Systems has created ground breaking systems such as the Tru-Lift Bracket, The Insta-Brace Anchor, and the Cross-Bolt Connection. Now, PierTech Systems has done it again with the patented Hercules Pile!

High Capacity Piles
 Due to load capacity and tolerances, traditional helical piercing customers are limited to residential and light commercial applications. **Not so with the Hercules Pile!** Engineered from the ground up to be a superior product, the Hercules Pile provides support for up to 500 tons! That is enough to easily support a 10 story building application!

Fast Installation
 The Hercules Pile is installed in the same way as a helical pile. By simply using a high flow excavator and a 3-5 man crew, the Hercules Pile is turned into the ground. There is no need to pour concrete, dig holes, nor wait for curing. With installation this fast, 20 piles can easily be installed in a day!

Low Noise and Vibration
 In many larger cities around the world vibration is a concern. In cities such as these the surrounding foundations must be taken into consideration. With the Hercules Pile this is not a headache! When installed correctly, the Hercules Pile produces absolutely no vibration! At all! Period! Its just that simple! PierTech Systems pre-engineers each pile to exact specifications to ensure that it will simply, accurately, and easily turn into the ground. If there is a concern for noise, the Hercules Pile is a must as well. The only noise that is produced from installing the Pile is that of the machine that turns it into the ground.

Custom made - BRAND NEW!
 In the foundation stabilization world there is nothing more important than having a product that works flawlessly in the work environment and will last for hundreds of years - no questions. Unlike many competitors, PierTech Systems custom manufactures each pile to the exact specifications of each project! That means that the product being delivered to the job site is new - never used for any other application! This provides customers with dependable piles that are high strength and will not corrupt the soil they are installed in.

ADVANTAGES OF THE **PierTech**
HERCULES PILE

- ✓ PATENTED CONNECTIONS
- ✓ CUSTOM MADE PILES
- ✓ LOAD CAPACITIES UP TO 500 TONS
- ✓ FROM 5 1/2" TO 16" DIAMETER SHAFTS
- ✓ PILES CAN BE GROUTED
- ✓ CAN BE GALVANIZED
- ✓ ALL WEATHER INSTALLATION
- ✓ LOW NOISE INSTALLATION
- ✓ VIBRATION FREE INSTALLATION
- ✓ NO OVERBURDEN
- ✓ SITE VERIFIED LOADING
